Bash scripting cheatsheet

Introduction

This is a quick reference to getting started with Bash scripting.

Learn bash in y minutes
(learnxinyminutes.com)

Bash Guide
(mywiki.woolledge.org)

Bash Hackers Wiki
(wiki.bash-hackers.org)

Example

```
#!/usr/bin/env bash

name="John"
echo "Hello $name!"
```

String quotes

```
name="John"
echo "Hi $name" ##=> Hi John
echo `Hi $name` ##=> Hi $name
```

Variables

```
name="John"
echo $name # See below
echo "$name"
echo "${name}"
```

Generally quote your variables unless they contain wildcards to expand or command fragments.

```
wildcard="*.txt"
options="ls"
cp -s $options $wildcard /tmp
```

Shell execution

```
echo "I'm in $(pwd)"
echo "I'm in `pwd`" # obsolescent
# Same
```

See Command substitution

Conditional execution

```
git commit && git push
git commit || echo "Commit failed"
```

Conditionals

```
if [[ -z "$string" ]]; then
  echo "String is empty"
elif [[ -n "$string" ]]; then
  echo "String is not empty"
fi
```

See: Conditionals

Functions

```
get_name() {
  echo "John"
}
```

```
echo "You are ${get_name}"
```

See: Functions

Strict mode

```
set -euo pipefail
IFS=$'\n'
```

See: Unofficial bash strict mode

Brace expansion

```
echo {A,B}.js

{A,B}          Same as A B
{A,B}.js       Same as A.js B.js
{1..5}         Same as 1 2 3 4 5
{1..3},{7..9}  Same as 1 2 3 7 8 9
```

See: Brace expansion

Parameter expansions

Basics

```
name="John"
echo "${name}"
echo "${name:3/3}" ##=> "john" (substitution)
echo "${name:0:2}" ##=> "Jo" (slicing)
echo "${name:2:2}" ##=> "jo" (slicing)
echo "${name::-1}" ##=> "John" (slicing)
echo "${name:(-1)}" ##=> "n" (slicing from right)
echo "${name:(-2):1}" ##=> "h" (slicing from right)
echo "${food:-Cake}" ##=> $food or "Cake"
```

length=2
echo "\${name:0:length}" ##=> "Jo"

See: Parameter expansion

```
str="/path/to/foo.cpp"
echo "${str%.cpp}" # /path/to/foo
echo "${str%.cpp}.o" # /path/to/foo.o
echo "${str%/*}" # /path/to
```

```
echo "${str%#*}" # cpp (extension)
echo "${str#*}" # foo.cpp (basepath)
```

```
echo "${str/*}" # path/to/foo.cpp
echo "${str#*/}" # foo.cpp
```

```
echo "${str/foo/bar}" # /path/to/bar.cpp
```

```
str="Hello world"
echo "${str:6:5}" # "world"
echo "${str:-5:5}" # "world"
```

```
src="/path/to/foo.cpp"
base=${src%*/} ##=> "foo.cpp" (basepath)
dir=${src%base} ##=> "/path/to/" (dirpath)
```

Prefix name expansion

```
prefix_a=one
prefix_b=two
echo "${prefix_*}" # all variables names starting
prefix_a prefix_b
```

Substitution

\${foo%suffix}	Remove suffix
\${foo%prefix}	Remove prefix
\${foo%ksuffix}	Remove long suffix
\${foo%ksuffix}	Remove long prefix
\${foo#prefix}	Remove long prefix
\${foo/#from/to}	Replace first match
\${foo//from/to}	Replace all
\${foo/#from/to}	Replace suffix
\${foo/#from/to}	Replace prefix

Manipulation

```
str="HELLO WORLD!"
echo "${str,,}" ##=> "hello world!" (lowercase is echo "${str,,}")
echo "${str,,}" ##=> "hello world!" (all lowercas
```

```
str="hello world!"
echo "${str^^}" ##=> "HELLO WORLD!" (uppercase is echo "${str^^}")
echo "${str^^}" ##=> "HELLO WORLD!" (all uppercas
```

Indirection

```
name=joe
pointer=name
echo ${!pointer}
joe
```

Comments

```
# Single line comment

: '
This is a
multi line
comment
'
```

Substrings

\$(foo:0:3)	Substring (position, length)
\$(foo:(-3):3)	Substring from the right

Length

\$(#foo)	Length of \$foo
----------	-----------------

Default values

\$(foo:-val)	\$foo, or val if unset (or null)
\$(foo:=val)	Set \$foo to val if unset (or null)
\$(foo:+val)	val if \$foo is set (and not null)
\$(foo:?message)	Show error message and exit if \$foo is unset (or null)

Omitting the : removes the (non)nullity checks, e.g. \$(foo-val) expands to val if unset otherwise \$foo.

Loops

Basic for loop

```
for i in $(cat/rc.); do
  echo "$i"
done
```

C-like for loop

```
for ((i = 0 ; i < 100 ; i++)); do
  echo "$i"
done
```

Ranges

```
for i in {1..5}; do
  echo "welcome $i"
done
```

With step size

```
for i in {5..50..5}; do
  echo "welcome $i"
done
```

Reading lines

```
while read -r line; do
  echo "$line"
done <file.txt
```

Forever

```
while true; do
  ...
done
```

Functions

Defining functions

```
myfunc() {
  echo "hello $1"
}
```

Same as above (alternate syntax)
function myfunc {
 echo "hello \$1"
}

```
myfunc "John"
```

Returning values

```
myfunc() {
  local myresult='some value'
  echo "$myresult"
}
```

```
result=$(myfunc)
```

Arguments

\$#	Number of arguments
\$*	All positional arguments (as a single word)
\$@	All positional arguments (as separate strings)
\$1	First argument
\$_	Last argument of the previous command

Note: \$@ and \$* must be quoted in order to perform as described. Otherwise, they do exactly the same thing (arguments as separate strings).

See Special parameters.

Raising errors

```
myfunc() {
  return 1
}
```

```
if myfunc; then
  echo "success"
else
  echo "failure"
fi
```

Conditionals

Conditions

Note that [[]] is actually a command/program that returns either 0 (true) or 1 (false). Any program that obeys the same logic (like all base utils, such as grep(1) or ping(1)) can be used as condition, see examples.

[[-z STRING]]	Empty string
[[-n STRING]]	Not empty string
[[STRING == STRING]]	Equal
[[STRING != STRING]]	Not Equal
[[NUM -eq NUM]]	Equal
[[NUM -ne NUM]]	Not equal
[[NUM -lt NUM]]	Less than
[[NUM -le NUM]]	Less than or equal
[[NUM -gt NUM]]	Greater than
[[NUM -ge NUM]]	Greater than or equal
[[STRING =~ STRING]]	Regex
((NUM < NUM))	Numeric conditions

More conditions

[[-o noclobber]]	If OPTIONNAME is enabled
[[! EXPR]]	Not
[[X && Y]]	And
[[X Y]]	Or

File conditions

[[-e FILE]]	Exists
[[-r FILE]]	Readable
[[-h FILE]]	Symlink
[[-d FILE]]	Directory
[[-w FILE]]	Writable
[[-s FILE]]	Size is > 0 bytes
[[-f FILE]]	File
[[-x FILE]]	Executable
[[FILE1 -nt FILE2]]	1 is more recent than 2
[[FILE1 -ot FILE2]]	2 is more recent than 1
[[FILE1 -ef FILE2]]	Same files

Example

```
# String
if [[ -z "$string" ]]; then
  echo "String is empty"
elif [[ -n "$string" ]]; then
  echo "String is not empty"
else
  echo "This never happens"
fi
```

```
# Combinations
if [[ [ X && Y ] ]]; then
  ...
fi
```

```
# Equal
if [[ "$a" == "$b" ]]
```

```
# Regex
if [[ "$a" =~ . ]]
```

```
if [[ $(($a < $b )) ]; then
  echo "$a is smaller than $b"
fi
```

```
if [[ -e "file.txt" ]]; then
  echo "file exists"
fi
```

Arrays

Defining arrays

```
Fruits=('Apple' 'Banana' 'Orange')
```

```
Fruits[0]="Apple"
Fruits[1]="Banana"
Fruits[2]="Orange"
```

Operations

```
Fruits+=("Fruits[0]") "Watermelon" # Push
Fruits+=("Watermelon") # Also Push
Fruits=( "${Fruits[@]/Ap//}" ) # Remove by regex match
unset Fruits[2] # Remove one item
Fruits=( "${Fruits[@]}" ) # Duplicate
Fruits=( "${Fruits[@]}" "${Veggies[@]}" ) # Concatenate
lines=$(cat "logfile") # Read from file
```

Working with arrays

```
echo "${Fruits[0]}" # Element #0
echo "${Fruits[-1]}" # Last element
echo "${Fruits[@]}" # All elements, space-separated
echo "${#Fruits[@]}" # Number of elements
echo "${#Fruits}" # String length of the 1st element
echo "${Fruits[3]}" # String length of the Nth element
echo "${Fruits[@]:3:2}" # Range (from position 3, length 2)
echo "${Fruits[@]}" # Keys of all elements, space-separated
```

Iteration

```
for i in "${arrayName[@]:"; do
  echo "$i"
done
```

Dictionaries

Defining

```
declare -A sounds
```

```
sounds[0]="bark"
sounds[dog]="bark"
sounds[cow]="moo"
sounds[bird]="tweet"
sounds[wolf]="howl"
```

Declares sound as a Dictionary object (aka associative array).

Working with dictionaries

```
echo "${sounds[dog]}" # Dog's sound
echo "${sounds[@]}" # All values
echo "${!sounds[@]}" # All keys
echo "${#sounds[@]}" # Number of elements
unset sounds[dog] # Delete dog
```

Iteration

Iterate over values

```
for val in "${sounds[@]:"; do
  echo "$val"
done
```

Iterate over keys

```
for key in "${!sounds[@]:"; do
  echo "$key"
done
```

Options

Options

set -o noclobber	# Avoid overlay files (echo "hi" > foo)
set -o errexit	# Used to exit upon error, avoiding cascading errors
set -o pipefail	# Unveils hidden failures
set -o nounset	# Exposes unset variables

Glob options

shopt -s nullglob	# Non-matching globs are removed ('*.foo' => '')
shopt -s failglob	# Non-matching globs throw errors
shopt -s nocaseglob	# Case insensitive globs
shopt -s dotglob	# Wildcards match dotfiles ('*.sh' => ".foo.sh")
shopt -s globstar	# Allow ** for recursive matches ('lib/**/*.rb' => 'lib

Set GLOBIGNORE as a colon-separated list of patterns to be removed from glob matches.

History

Commands

history	Show history
shopt -s histverify	Don't execute expanded result immediately

Operations

!!	Execute last command again
!!:s<FROM>/<TO>/	Replace first occurrence of <FROM> to <TO> in most recent command
!!:gs<FROM>/<TO>/	Replace all occurrences of <FROM> to <TO> in most recent command
!:t	Expand only basename from last parameter of most recent command
!:h	Expand only directory from last parameter of most recent command

!! and !s can be replaced with any valid expansion.

Expansions

!\$	Expand last parameter of most recent command
!*	Expand all parameters of most recent command
!-n	Expand nth most recent command
!n	Expand nth command in history
!<command>	Expand most recent invocation of command <command>

Slices

!!:n	Expand only nth token from most recent command (command is 0; first argument is 1)
!^	Expand first argument from most recent command
!\$	Expand last token from most recent command
!!:n-m	Expand range of tokens from most recent command
!!:n-\$	Expand nth token to last from most recent command

!! can be replaced with any valid expansion i.e. !cat, !-2, !42, etc.

Miscellaneous

Numeric calculations

```
$(a = 200) # Add 200 to $a
```

```
$(($RANDOM%200)) # Random number 0..199
```

```
declare -i count # Declare as type integer
count+=1 # Increment
```

Inspecting commands

```
command -v cd
##=> "cd is a function/alias/whatever"
```

Trap errors

```
trap 'echo I'm at about $LINENO' ERR
```

or

```
traperr() {
  echo "ERROR: ${BASH_SOURCE[1]} at about ${BASH_LINENO[0]}"
}
```

```
set -o erretrace
trap traperr ERR
```

Source relative

```
source "${0%*/}/../share/foo.sh"
```

Transform strings

-c	Operations apply to characters not in the given set
-d	Delete characters
-s	Replaces repeated characters with single occurrence
-t	Truncates
[[:upper:]]	All upper case letters
[[:lower:]]	All lower case letters
[[:digit:]]	All digits
[[:space:]]	All whitespace
[[:alpha:]]	All letters
[[:alnum:]]	All letters and digits

```
echo "Welcome to Devhints" | tr '[:lower:]' '[:upper:]'
WELCOME TO DEVHINTS
```

Heredoc

```
cat <<END
hello world
END
```

Reading input

```
echo -n "Proceed? [y/n]: "
read -r ans
echo "$ans"
```

The -r option disables a peculiar legacy behavior with backslashes.

```
read -n 1 ans # Just one character
```

Go to previous directory

```
pwd # /home/user/foo
cd bar/
pwd # /home/user/foo/bar
cd -
pwd # /home/user/foo
```

Grep check

```
if grep -q 'foo' ~/.bash_history; then
  echo "You appear to have typed 'foo' in the past"
fi
```

Subshells

```
pwd somedir; echo "I'm now in $(pwd)"
##=> still in first directory
```

Redirection

```
python hello.py > output.txt # stdout to (file), append
python hello.py >> output.txt # Non-matching globs throw errors
python hello.py 2> error.log # stderr to (file)
python hello.py 2>&1 # stderr to stdout
python hello.py 2>dev/null # stderr to (null)
python hello.py >output.txt 2>&1 # stdout and stderr to (file), equiv
python hello.py &&dev/null # stdout and stderr to (null)
echo "$0: warning: too many users" >&2 # print diagnostic message to stderr
```

```
python hello.py < foo.txt # feed foo.txt to stdin for python
diff <(ls -r) <(ls) # Compare two stdout without files
```

Case/switch

```
case "$1" in
  start | up)
    vagrant up
    ;;
  *)
    echo "Usage: $0 {start|stop|ssh}"
    ;;
esac
```

printf

```
printf "Hello %, I'm %s" Sven Olga
##=> "Hello Sven, I'm Olga"

printf "1 + 1 = %d" 2
##=> "1 + 1 = 2"
```

```
printf "This is how you print a float: %f" 2
##=> "This is how you print a float: 2.000000"
```

```
printf "%s\n" $(ls /bin/bash) 'echo hello' >file
# Format string is applied to each group of arguments
printf "%i%i%i\n" 1 2 3 4 5 9
```

Directory of script

```
dir=${0%/*}
```

Getting options

```
while [[ "$1" == -h && ! "$1" == "--" ]]; do case $1 in
  -V | --version)
    echo "version"
    exit
    ;;
  -s | --string)
    shift; string=$1
    ;;
  -f | --flag)
    ;;
  --flag)
    flag=1
    ;;
  esac; shift; done
if [[ "$1" == '--' ]]; then; then shift; fi
```

Special variables

\$?	Exit status of last task
\$!	PID of last background task
\$\$	PID of shell
\$0	Filename of the shell script
\$_	Last argument of the previous command
\$(PIPESTATUS[n])	return value of piped commands (array)

See Special parameters.

Check for command's result

```
if ping -c 1 google.com; then
  echo "It appears you have a working internet connection"
fi
```
